

Sumfoam
CARRIER MATERIAL
Versatile. Selective.

Sumfoam

1 g of Sumfoam

Sumfoam is a high performance carrier for the production of additive masterbatches. With its nano porous structure it is able to absorb liquid media and yield them selectively in case of use.

-  Suitable for nonpolar fluids due to its highly hydrophobic surface
-  Absorbs up to 6 times its own weight by remaining pourable
-  Outstanding binding performance by strong capillary forces
-  Homogeneous structure leads to an even distribution of the media
-  Granules or customized grinding into flakes or a fine powder
